

We are Actim

– A subsidiary of the
Finnish biotechnology group
Medix Biochemica.

Actim is developing three different diagnostic tests to aid in COVID-19 pandemic

Serological antibody detection test **ELISA SARS-Co-2 IgG/IgM**

- An immunoenzymometric assay for quantitative detection of specific IgG and IgM to SARS-CoV-2
- Sample type: serum from venous blood
- The test is intended for professional use to help diagnose recent COVID-19 infection
- The first batches will be available for testing in July
- Plates and reagents are developed and produced in Finland

Serological antibody detection test **Actim SARS-CoV-2 IgG/IgM**

- A qualitative immunochromatographic dipstick test for detection of specific IgG and IgM to SARS-CoV-2
- Sample type: small amount of whole blood
- The test is intended for professional use to help diagnose recent COVID-19 infection
- The first batches will be available for testing in August
- Tests are developed and produced in Finland

SARS-CoV-2 virus antigen detection rapid test for acute use **Actim SARS-CoV-2**

- A qualitative immunochromatographic dipstick test for detection of SARS-CoV-2 virus antigens
- Sample type: respiratory sample
- The test is intended for professional use to help diagnose acute COVID-19 infection
- First batches will be available for testing in August
- Tests are developed and produced in Finland
